TOPICS

The mechanism of herbicide resistance and effective resistance management. Specific focus: Managing clethodim resistance and the use of propyzamide in RR, RT and TT canola systems.

Crop suppression research and managing ryegrass more effectively through plant biomass and multiple herbicide MOA applications and rotations. Specific focus: Simply rotating herbicide MOA actually increases the frequency of resistance, however exposing populations to multiple MOA through tank-mixtures greatly reduces the selection for resistance.

TOUR DATES

FOR MORE INFO

Central & Northern WA
Steve Lamb 0429 619 103

Southern WA
Mitch Tuffley 0448 014 892
